PROFILE SUMMARY

Computer Science undergraduate (CGPA 8.86) with hands-on experience building data-driven applications in Python and Java, integrating custom software with third-party APIs and open-source AI models, and working with relational databases. Comfortable designing pipelines combining structured data with application logic, with hands-on exposure to Microsoft Azure AI Foundry and a strong interest in cloud deployment and enterprise integration.

AREA OF EXPERTISE

- **Programming Languages:** C, Java, Python
- **Databases & Data Pipelines:** MySQL; built retrieval pipelines that combine database queries with LLM outputs for accurate, real-time responses
- **Third-Party & API Integration:** Integrated custom applications with open-source LLMs (LLaMA, Mistral) and with Google Forms API for voice-driven data entry
- **Cloud:** Hands-on experience with Microsoft Azure AI Foundry (model deployment and configuration through applied coursework)
- **Web Technologies:** HTML, CSS, React, Next.js, Node.js
- **Tools & Frameworks:** Unity3D, Unity API, Software Testing, Power BI
- UX Design
- **Soft Skills:** Time management, effective communication, cross-functional collaboration

PROFESSIONAL EXPERIENCE

AI Engineer Intern, Hrudai NCPL

12/2025 – 07/2026

- Independently designed, developed, and deployed Ram Setu (ramsetu.ai), a full-stack AI-powered travel planning web application, owning the project end-to-end from architecture through deployment
- Built a responsive React/Next.js frontend backed by a Node.js server and database, integrating AI-generated itinerary planning, flight/hotel booking search, interactive maps and route planning, and personalized recommendations
- Used Claude (Claude Code) as the primary AI development environment across the full stack, accelerating frontend, backend, and integration work

Intern, Ideabytes

05/2025 – 07/2025

- Developed and integrated custom applications with open-source Large Language Models (LLaMA, Mistral), connecting internal application logic to external model APIs
- Built Retrieval-Augmented Generation (RAG) pipelines that combine database lookups with LLM responses to improve accuracy — direct experience aggregating and routing data between a data store and a processing layer
- Built a voice-controlled assistant integrating with the Google Forms API, enabling natural-language form completion — an example of integrating a custom solution with a third-party product
- Achieved 90%+ accuracy in LLM output testing, working iteratively with stakeholders to validate results

EDUCATION

Bachelor of Technology in Computer Science, GITAM University

09/2022 – 04/2026

CGPA: 8.86

Intermediate, Sri Chaitanya Junior College

06/2020 – 06/2022

Marks: 909/1000

X, KKR Gowtham Concept School

08/2019 – 06/2020

Marks: 595/600

PROJECTS

- **Ram Setu (ramsetu.ai):** AI-powered travel planner (React/Next.js, Node.js) with AI itinerary generation, flight/hotel booking search, interactive maps, and personalized recommendations — see Hrudai NCPL experience above.
- **Smart Wristband for Deaf People:** Wearable prototype detecting incoming calls and emergency alerts, with directional visual indicators conveying source and urgency.
- **Movie Ticket Booking System:** Responsive web platform (HTML, CSS, JavaScript) with dynamic seat selection and showtime filtering.
- **Voice Assistant:** Designed and integrated AI-powered applications using open-source LLMs (LLaMA, Mistral) with RAG pipelines combining database content and model responses.

CERTIFICATES

- IT Automation with Python — Google, via Coursera
- AI with Python
- Software Testing — NPTEL
